Micromachined Ultrasound-Based Proximity Sensors (Microsystems)

Mark R. Hornung, Oliver Brand

Micromachined Ultrasound-Based Proximity Sensors (Microsystems) Mark R. Hornung, Oliver Brand
Micromachined Ultrasound-Based Proximity Sensors presents a packaged ultrasound microsystem for object detection and distance metering based on micromachined silicon transducer elements. It describes the characterization, optimization and the long-term stability of silicon membrane resonators as well as appropriate packaging for ultrasound microsystems.

Micromachined Ultrasound-Based Proximity Sensors describes a cost-effective approach to the realization of a micro electro mechanical system (MEMS). The micromachined silicon transducer elements were fabricated using industrial IC technology combined with standard silicon micromachining techniques. Additionally, this approach allows the cointegration of the driving and read-out circuitry. To ensure the industrial applicability of the fabricated transducer elements intensive long-term stability and reliability tests were performed under various environmental conditions such as high temperature and humidity.

Great effort was undertaken to investigate the packaging and housing of the ultrasound system, which mainly determine the success or failure of an industrial microsystem. A low-stress mounting of the transducer element minimizes thermomechanical stress influences. The developed housing not only protects the silicon chip but also improves the acoustic performance of the transducer elements.

The developed ultrasound proximity sensor system can determine object distances up to 10 cm with an accuracy of better than 0.8 mm.

Micromachined Ultrasound-Based Proximity Sensors will be of interest to MEMS researchers as well as those involved in solid-state sensor development.

From reader reviews:

Latasha Hisle:

Do you have favorite book? Should you have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each publication has different aim or perhaps goal; it means that publication has different type. Some people really feel enjoy to spend their time and energy to read a book. They are reading whatever they consider because their hobby will be reading a book. How about the person who don't like reading a book? Sometime, man feel need book after they found difficult problem or perhaps exercise. Well, probably you will need this Micromachined Ultrasound-Based Proximity Sensors (Microsystems).

Helen Green:

The publication untitled Micromachined Ultrasound-Based Proximity Sensors (Microsystems) is the book that recommended to you to study. You can see the quality of the book content that will be shown to you actually. The language that publisher use to explained their way of doing something is easily to understand. The copy writer was did a lot of exploration when write the book, therefore the information that they share to you personally is absolutely accurate. You also could get the e-book of Micromachined Ultrasound-Based Proximity Sensors (Microsystems) from the publisher to make you much more enjoy free time.

Douglas Stevens:

The actual book Micromachined Ultrasound-Based Proximity Sensors (Microsystems) has a lot of information on it. So when you read this book you can get a lot of help. The book was published by the very famous author. Mcdougal makes some research ahead of write this book. This book very easy to read you will get the point easily after looking over this book.

James Brown:

Don't be worry for anyone who is afraid that this book can filled the space in your house, you can have it in e-book way, more simple and reachable. That Micromachined Ultrasound-Based Proximity Sensors (Microsystems) can give you a lot of friends because by you considering this one book you have issue that they don't and make a person more like an interesting person. This book can be one of a step for you to get success. This guide offer you information that probably your friend doesn't know, by knowing more than other make you to be great men and women. So , why hesitate? We should have Micromachined Ultrasound-Based Proximity Sensors (Microsystems).
